MEMORANDUM FOR : Deputy for Technology, Office of Special Activities

ATTENTION :

[REDACTED]

25X1

SUBJECT

: Modified Log-E-Tronic Strip Printer

25X1

1. In a conversation with [REDACTED] of NPIC the afternoon of 18 October, he mentioned having seen at ACIC, St. Louis, recently a modified SP-1070 Log-E-Tronic Strip Printer which has a gadget on it that apparently permitted some form of automatic retitling of 9" by 18" thin base film. It was his thought that this modification might be useful in connection with sanitizing certain "T" materials or for use in those cases where it was necessary to retitle material in the course of duplication such as with [REDACTED] He put this modification in the ballpark of [REDACTED] per machine and added that this was the prototype installation according to his information and that it was back on the West Coast in the plant having some of the bugs shaken out of it.

2. I would appreciate if you would let me know whether you think this has any application to our problems either at [REDACTED] or possibly E-K. If you find out anything about it from [REDACTED] in greater depth, please see if you can evaluate it and give us a recommendation as to whether we should consider it seriously.
